Okta OIDC SSO - Configuration Guide

Prerequisites

1. Admin Access to your BrandLife account.
2. Admin access to your Okta Organization.

Supported Features

Service Provider (SP)-Initiated Authentication (SSO) Flow - this authentication flow occurs when the user attempts to log in to the application from BrandLife.

User Federation, role management, etc. are not supported. Users and BrandLife Permissions will still need to be managed from your BrandLife account settings page.

Configuration Steps

1. In Okta, Go to Applications → Browse App Catalog, and search and add BrandLife.
2. Assign the users or groups that should be able to log into BrandLife.
3. Go to the BrandLife App → Sign On tab in Okta and note the Client ID and Client Secret.
4. In the BrandLife platform navigate to the [SSO Settings page](#).
5. Click "+ Add SSO Provider".
6. Enter the name of the integration (can be something to help you identify it).
7. Enter the Login Slug of your choice (will be used to generate a custom Login SSO URL).
8. Enter your Okta Issuer Value as well as the Client ID and Client Secret noted earlier.
9. Fill in the rest of the form and press "Add Provider".
10. Now everything is setup.

Logging into BrandLife using Okta

1. Go to this URL: https://app.brandlife.io/login/sso/your-login-slug (replace the slug with the one you entered previously)
2. If you are prompted for your Okta username and password, enter them.
3. If the credentials are valid and Okta user is assigned to the BrandLife app integration, you will be redirected to BrandLife and will be logged in.
